SUMMARY

Data analyst with production experience in system planning, inventory analysis, and KPI reporting across semiconductor manufacturing. Skilled in **Python**, **SQL** and **PowerBI** with a record of automating sales and operations planning (S&OP) and master production schedule (MPS) reporting, replacing manual processes with repeatable, self-service tools for finance and planning stakeholders.

SKILLS

Supply Chain: System Planning, Supply Planning, S&OP, S&OE, Master Production Schedule (MPS), Inventory Analysis, Backlog Management, Forecasting

Business Analysis: Requirements Gathering, Stakeholder Management, Process Improvement, Variance Analysis, Root Cause Analysis, KPI Reporting, User Acceptance Testing, Documentation

Data and BI: Power BI, Power Query, DAX, Streamlit, Excel (Advanced), Matplotlib, Seaborn, Data Modeling, Data Cleansing.

Programming: Python (Pandas, NumPy, openpyxl), SQL, R

Automation and AI: Power Automate, Copilot Studio, AI Agents, Process Automation

EXPERIENCE

Data Analyst Intern, Planning Systems **January 2026 - Present**

GlobalFoundries

- Automated seven recurring supply chain planning and finance reports using Python, Power BI, and Power Automate, cutting manual effort by roughly 85% and saving an estimated 587 hours a year.
- Rebuilt the weekly work-in-progress (WIP) and backlog-to-start cost projection process, removing approximately 150 hours of manual data prep a year and standardizing the cost calculations behind finance reporting.
- Built AI agents that answer inventory and production planning questions on demand, giving analysts self-service access to data that used to require a manual pull.
- Automated master production schedule (MPS) data prep and publication, plus dashboards comparing cycle-over-cycle schedules against budget and forecast, replacing hand-built decks with a repeatable template.
- Gathered requirements from finance and planning stakeholders, ran user validation, and authored handover documentation so the team could run the tools independently.

Analytical Consulting Intern **August 2025 – October 2025**

Tiger Analytics

- Analyzed client datasets using data cleaning, data modeling, exploratory analysis, and variance analysis to identify trends and key drivers behind business performance.
- Built dashboards and automated reports for KPI tracking, forecasting, and performance analysis, translating complex data into actionable business insights.
- Supported analytical consulting engagements by converting business requirements into data-driven insights and recommendations for stakeholder decision-making.

PROJECTS

ARTI-E – Articulated Robotic Transfer Intelligence | *Python, OpenCV, FastAPI, React, Three.js,* ***link***

- Developed a browser-based 3D semiconductor wafer-handling simulator integrating OpenCV-based wafer localization, inverse kinematics, and RRT-Connect motion planning for collision-aware robotic pick-and-place operations.
- Implemented 3-DOF and 4-DOF robotic arm models with trajectory visualization, obstacle avoidance, and performance benchmarking to evaluate motion-planning efficiency and simulated wafer transfers.

Wafex – Semiconductor Wafer Defect Classification | *Python, CNN, Deep Learning, Vision Transformers, ImageNet* ***link***

- Developed a CNN-based wafer defect classification model using the WM-811K semiconductor manufacturing dataset, achieving 95.1% accuracy across 8 defect types.
- Applied deep learning and wafer map pattern recognition to defect screening and support semiconductor yield and quality analysis.

NeuroAsha, Dementia Companion | *Python, CNN, Vision Transformers, ImageNet, Deep Learning* ***link***

- Built a CNN-based Alzheimer's MRI classifier achieving ~95% accuracy, integrated with LLM-based symptom tracking for early dementia prediction.

Semiconductor Industry Case Study Dashboard | *Python, Pandas, Streamlit* ***link***

- Developed an interactive Streamlit dashboard comparing Revenue, COGS, Inventory, and Cash Flow across Western Digital, Micron, Intel, and TSMC.
- Processed and transformed financial datasets using Python and Pandas to perform variance analysis, KPI reporting, trend analysis, and forecasting for comparative business performance analysis.

Bheeshma – Bhagavad Gita Companion | *React, Python* ***link***

- Built a React-based Bhagavad Gita web app featuring 701 verses across 18 chapters, multilingual text, translations, guidance, and audio.
- Developed Python scripts to scrape and process verse data from Gita Supersite, integrating Sanskrit text, translations, commentaries, and recitations.

Ridezilla, Strava Ride Companion | *Python, Streamlit, REST API* ***link***

- Built an interactive analytics dashboard integrating the Strava API to track cycling performance over time.
- Implemented ride prediction, underperformance detection, heatmaps, and automated monthly recaps.

EDUCATION

Bachelor of Engineering, Computer Science and Engineering 2022 – 2026
Vellore Institute of Technology, Andhra Pradesh *CGPA: 8.04/10*

Pre-University 2020 – 2022
Miranda Composite PU College *86%*

CERTIFICATIONS

Oracle Cloud Infrastructure 2025 Certified Data Science Professional
Oracle Cloud Certified Generative AI Professional 2025
PCAP Programming Essentials in Python
Neo4j Certified Professional
Data Analytics Certified from CISCO

LEADERSHIP AND VOLUNTEERING

Hostel Committee and Kannada Association (VIT-AP, 2023-2025),
Mentored juniors through leadership workshops, led the creative team for cultural events,
Taught computer skills at a government school in Bairasandra.
